Installing add-on R packages

R packages are collections of functions and data sets developed by the community. They increase the power of R by improving existing base R functionalities, or by adding new ones.

Using RStudio, you can easily install additional R packages. Go to "Packages" and "Install", a little window pops up where you can enter the package name(s). Install from CRAN to the default library, and keep "Install dependencies" activated.

Please install following libraries:

- R.matlab
- tidyverse
- ggplot2
- lubridate
- nlstools
- xlsx
